

# DJayINFRA SYSTEM

The DJayINFRA SYSTEM by DJayGEAR is a quick and easy solution for events who want clean and tidy DJ booths.

In the past the best solution to create a tidy and neutral looking DJ booth was to place a black cloth over all the cables, power strips and stageblock. Without the effect of black humps, we created a posh cable tray with all the connections a basic DJ set-up needs. It's easy to place, well-organized and clean!

With labeled SPDIF/RCA-, power- and ethernet cables pre-installed, a DJ set-up is connected within a few seconds. Need to charge a phone or connect extra gear? No worries. For easy accessibility an extra powerstrip is installed facing towards the dj set. The only cables clearly visible will be the LK37- and Powercon cables which connections are installed on the right side of the system.

When used outdoors, a small gap between the cable tray and front plate can be filled up with a sunscreen. It can be mounted with minimum effort and without disrupting the DJ.

## Specifications

- 1x INFRA SYSTEM (1,95m x 0,33m x 0,15m)
  - 2x Netgear GS108 ethernet switch (one for backup)
  - 4x RCA & SPDIF cable
  - 5x Power cable
  - 5x Ethernet cable
  - 12x XLR in- & outputs
  - 7x Extra power outlets
  - 1x LED strip
- 1x Foam mat
- 1x LK37 with Pigtail + Powercon (15m)
- 1x Sunscreen (optional)
- 1x DJayGEAR Power Switch (optional)

## Requirements

With the DJayINFRA SYSTEM there's nothing extra needed. Just make shure:

- the stagedeck has a clear space of 2m width and 80cm depth.
- the stageblock and power source are underneath the stagedeck.
